Summary

Final-year Information Technology student (GPA 3.97/4.00) who builds full projects end to end: frontend in Next.js and React, backend in NestJS and Laravel, data in PostgreSQL, shipped with Docker. Maintainer of an open-source npm package now used inside 20+ different AI coding tools, with real users outside my own computer. Comfortable opening up someone else's code, connecting it to an API, and turning a blank database into a working demo. Looking for a Software Engineering Internship where I can write code that goes into production, not just a school assignment.

Education

Universitas Bina Sarana Informatika (UBSI)

Depok, Indonesia

Bachelor's Degree in Information Technology (S1) | GPA: 3.97 / 4.00

Sept. 2023 – Present

- Semester 7. Coursework: Data Structures, Database Systems, Software Engineering, Cryptography, Image Processing.

Certifications & Courses

PCAP: Programming Essentials in Python

Indonesia

Cisco Networking Academy & OpenEDG Python Institute

July 2024

BNSP Professional Certification (Analyst Scheme)

Indonesia

In progress | Live assessment: July 29, 2026

Projects

Agentic Senior Core (Creator & Maintainer) | npm | GitHub

2026

- Open-source plugin that gives AI coding agents (Claude Code, Cursor, Codex, Copilot, and 20+ other hosts) a shared set of engineering rules, so they stop over-building simple requests.
- Published as @ryuenn3123/agentic-senior-core on npm. Internal benchmarks show 30% fewer tokens and 42% lower cost on complex coding tasks versus no rules at all.

Vespa Storefront (Fullstack E-commerce & ERP Integration) | GitHub

2026

- Built a 3-service e-commerce platform (NestJS, Next.js, Docker) that syncs orders and pricing automatically with the store's Accurate accounting system, removing manual data entry between the two.
- Wired up the Midtrans Snap payment integration so the charged amount is always computed from the server-stored order total rather than client input, closing off price manipulation at checkout by design.

Digital Credential Platform (Solo Developer) | GitHub

2025

- Designed and built a platform for issuing certificates as NFTs, with wallet-based login for credential holders and a separate JWT login for institutions.
- Stored certificate records on the Polygon blockchain instead of a database alone, so an employer could verify one directly on-chain without needing to contact us. Backend ran on NestJS, Prisma, and PostgreSQL, with certificate files stored on IPFS.

Experience

Freelance Web Developer

Indonesia (Remote)

Team of 3

Sept. 2025 – Dec. 2025

- Developed the Next.js storefront and checkout flow for a production e-commerce site and connected it to the backend API.
- Used Git to coordinate with two other developers and hit every milestone across the 3-month contract.

Web & Content Intern

Indonesia

Agronesia

2022 (3 Months)

- Built product landing pages with HTML and CSS and produced marketing content for the company's social media.

Technical Skills

Languages: TypeScript, JavaScript, Python, PHP, SQL

Frameworks & Libraries: Next.js, React, NestJS, Laravel, FastAPI, Vitest, Tailwind CSS

Databases & Infrastructure: PostgreSQL, MySQL, Prisma, Docker, Git, Linux

Other: REST API design and integration

Spoken Languages: Indonesian (Native), English (Reading & Written Communication)
