Summary

Final-year Information Technology student (GPA 3.98/4.00) who builds full projects end to end: frontend in Next.js and React, backend in NestJS and Laravel, data in PostgreSQL, shipped with Docker. Maintainer of an open-source npm package now used inside 20+ different AI coding tools, with real users outside my own computer. Comfortable opening up someone else’s code, connecting it to an API, and turning a blank database into a working demo. Looking for a Software Engineering Internship where I can write code that goes into production, not just a school assignment.

Education

Universitas Bina Sarana Informatika (UBSI) <i>Bachelor’s Degree in Information Technology (S1) GPA: 3.98 / 4.00</i> Semester 7. Coursework: Data Structures, Database Systems, Software Engineering, Cryptography, Image Processing.	Depok, Indonesia <i>Sept. 2023 – Present</i>
--	---

Certifications & Courses

PCAP: Programming Essentials in Python <i>Cisco Networking Academy & OpenEDG Python Institute</i>	Indonesia <i>July 2024</i>
BNSP Professional Certification (Analyst Scheme, SKM-2019-62010-02) <i>Declared Competent Certificate in issuance</i>	Indonesia <i>Assessed July 29, 2026</i>

Projects

Agentic Senior Core (<i>Creator & Maintainer</i>) npm GitHub - Open-source plugin that gives AI coding agents (Claude Code, Cursor, Codex, Copilot, and 20+ other hosts) a shared set of engineering rules, so they stop over-building simple requests. - Published as @ryuenn3123/agentic-senior-core on npm. Internal benchmarks show 30% fewer tokens and 42% lower cost on complex coding tasks versus no rules at all.	2026
Jakarta Scooter Shop (<i>Fullstack E-commerce & ERP Integration</i>) Live Site - Built REST API endpoints in NestJS on PostgreSQL, containerized with Docker; synced stock and pricing in real time with the client’s Accurate ERP using atomic reservations and webhook validation to prevent overselling. - Integrated Midtrans Snap with server-side order-total calculation, closing off price manipulation at checkout, and found and closed an IDOR vulnerability during testing.	2025
Neuro-Symbolic AI Trading Architecture GitHub Built a crypto trading framework in Python combining a hybrid LR-LSTM forecasting ensemble, a 5-action Deep Q-Network agent, and a rule-based symbolic safety net (ATR, RSI, SMA); backtested on BTC, ETH, and XRP, the safety net reduced Maximum Drawdown by 9.3–10.5 percentage points on ETH/XRP versus a pure DQN baseline. Findings accepted as a journal article in a SINTA 2-accredited journal (JTIHK).	2026

Experience

Freelance Web Developer <i>Team of 3</i> - Developed the Next.js storefront and checkout flow for a production e-commerce site and connected it to the backend API. - Used Git to coordinate with two other developers and hit every milestone across the 3-month contract.	Indonesia (Remote) <i>Sept. 2025 – Dec. 2025</i>
Web & Content Intern <i>Agronesia</i> Built product landing pages with HTML and CSS and produced marketing content for the company’s social media.	Indonesia <i>2022 (3 Months)</i>

Technical Skills

Languages: TypeScript, JavaScript, Python, PHP, SQL
Frameworks & Libraries: Next.js, React, NestJS, Laravel, FastAPI, Vitest, Tailwind CSS
Databases & Infrastructure: PostgreSQL, MySQL, Prisma, Docker, Git, Linux
Other: REST API design and integration, AI-assisted development
Spoken Languages: Indonesian (Native), English (Reading & Written Communication)
